

Dear Gentlepersons:

I am writing to voice my concerns as well as objection to the construction of biomass incinerators, that use our forests for "fuel", here in Mass. I don't know if you are aware that the area of woodland to be harvested from for just the Greenfield plant is more sq. miles than all of Mass. forested lands. And then there are other plants of similar size being proposed!

And of course the plants will foul the air and produce additional CO₂. And to top all of this the speculators expect to be subsidized in messing up our environment.

So please conclude that the proposed biomass plants are not in our best interest.

Thank you
